

ABSTRACT

A method for indicating performance enhancements in a wireless transmit/receive unit (WTRU) to a user in a wireless communication system begins with operating a radio link to the WTRU with a performance enhancement active. The operating results with the performance enhancement active are measured. The radio link to the WTRU is operated with the performance enhancement inactive and the operating results with the performance enhancement inactive are measured. The measurements with the performance enhancement active and the performance enhancement inactive are compared, and a display indicator on the WTRU is prepared and displayed, showing the performance difference of the WTRU when the performance enhancement is active and inactive.
